

## **FreedomNets - Whitepaper**

FreedomNets is a decentralized social media platform powered by distributed ledger technologies (DLT) like blockchain. As such, all activities on the platform are recorded on a decentralized protocol where no central authority can control or oversee, unlike centralized networks like Facebook, YouTube.

Traditional social platforms not just control users' posts but also oversee what users can see. As a result, they present users with attention-grabbing advertising content, making them more entertained than well-informed. On the other hand, users from FreedomNets have the freedom to interact however they wish without censorship.

In addition, FreedomNets, being a decentralized social media platform, has no right to sell any user data, which is one of the main concerns with centralized social networks. According to a study conducted by pCloud, 52% of apps share your data with third parties. It found that Instagram shares 79% of your personal data, putting it ahead of Facebook, which shares 57% of your data, by comparison. The top 10 also include LinkedIn, Uber Eats, Trainline, YouTube and YouTube Music, Deliveroo, Duolingo, and eBay.

What is FreedomNets token?

FreedomNets token is a hyper-deflationary, inclusive and ethical BEP-20 token. Total supply of the token is 10 trillions. It combines the best 3 protocols in the BEP-20 token crypto space, to create a truly powerful crypto.

FreedomNets token is the base currency of the FreedomNets community. Owning the tokens gives users exclusive content access with payment transfer. More uses will be announced throughout the journey.

It employs 3 popular protocols, incorporating them together in the smart contract, to give it the strength of 3 tokens in one. These features make FreedomNets unique and a rewarding investment.

## Features

- Reflection
- Burn
- Auto-liquidity

## Taxation

In each trade, the transaction is taxed a 10% fee, which is split 2 ways.

5% fee = redistributed to all existing holders

5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the Freedomnets tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

## What is reflection?

This is where any FreedomNets token transactions are charged a fee ( 5%), which get distributed among holders of the token. Holders' balances grow automatically by just holding.

As a result, it solves a host of problems. First, the reward amount is conditional upon the volume of the token being traded. This mechanism aims to alleviate some of the downward sell pressure put on the token caused by earlier adopters selling their tokens after farming crazy high APY's. Second, the reflect mechanism gives incentives to long term holders to continue to hang onto their token. Given manual burns and great rewards for holders, the token price would likely remain supportive.

## Manual Burns

Freedomnets token price is driven by supply and demand. Given great reflections, demand will remain robust. On the other hand, manual burn is a great method to control the supply side, which gives long term holders more incentive to hang onto . Burning tokens will be controlled by our experienced team as it provides better rewards for the community with more transparency. FreedomNets team aims to apply a burn strategy that is beneficial and rewarding for all holders. Lastly, the total amount of

FreedomNets tokens burned will be communicated by our marketing team via all the media channels and websites.

### AUTOMATIC Liquidity Provider

Automatic LP is the last and the most powerful feature benefiting holders. Here we have a function that acts as a two-fold beneficial implementation for holders. First, the contract sucks up tokens from sellers and buyers alike, and adds them to the LP creating a solid price floor. Second, the penalty acts as an arbitrage resistant mechanism that secures the volume of FreedomNets token as a reward for the holders. In theory, the added LP creates a stability from the supplied LP by adding the tax to the overall liquidity of the token, thus increasing the tokens overall LP and supporting the price floor of the token. This is different from the burn function of other reflection tokens which is only beneficial in the short term from the granted reduction of supply.

As the FreedomNets token LP increases, the price stability mirrors this function with the benefit of a solid price floor and cushion for holders. The goal here is to prevent the larger dips when whales decide to sell their tokens later in the game, which keeps the price from fluctuating as much as if there was no automatic LP function.

## Token Distribution

Total supply: 10 trillions

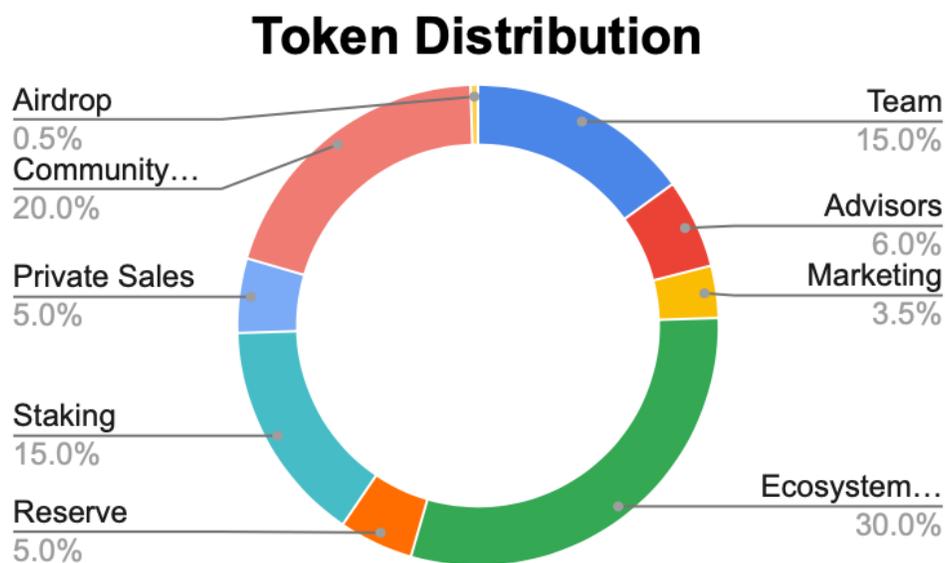

<b>Purpose</b>	<b>Distribution / %</b>
Team*	15
Advisors**	5
Marketing	3.5
Ecosystem Development	30
Reserve	5
Staking***	15
Private Sales****	5
Community Sales	20
Airdrop	1.5
<b>Total</b>	<b>100</b>

\*All the tokens from the founding team are locked up for 3 years and will be released after the period.

\*\*Tokens owned by advisors are locked up for 1.5 years.

\*\*\*In order to give incentive to users joining our platform in the beginning, we will distribute high staking returns at the start. As additional use cases for the tokens, the return will decrease gradually.

\*\*\*\*Given the lower entry price, the tokens from early investors are locked up for 2 years.

## The FreedomNets Team

Freedom is backed by a team of experienced specialists who have worked in big name centralised social media platforms, IT companies and investment banks. We are also actively hiring marketers, influencers and audit teams that we can leverage on, such that we can truly focus on delivering the best results to our investors.

## Roadmap

It is important that we outline a paved direction for the project and what we plan to do. This is so our investors can use this as a yard stick to measure our performance to help reassure them that not only is the project alive, but it is delivering on committed work.

We have intentionally left wiggle room in each of our quarters to ensure that we can adjust our direction for work that is asked of us by our investors.

### Q4 2021- Q1 2022: Establishment

- » Create a Telegram & Twitter
- » Launch the website
- » Publish the white paper
- » Host a private sale
- » Launch to PancakeSwap V2
- » Listing on CoinGecko and CoinMarketCap
- » Listing on BscScan
- » Listing on several centralised exchanges
- » Hiring more technical members
- » 80+ marketing campaigns will roll out globally

### Q2 2022: Development

- » First version of FreedomNets platform will go live
- » Users will be able to write any posts and will be connected based on their preferences
- » Create a sustainable community without any advertisements
- » FreedomNets token will be able to used as payment

### Q3 2022- Q1 2023: Development

- » NFTs will be able to show on the platform, where users can comments/likes

- » Chat Rooms will be able to create
- » Contracts / documents will be able to confirm/ sign through the platform
- » More than 50 marketing campaigns will be hold globally

#### Q2 2023 : Gaming

- » Games will be able to list on our platform, where users can communicate through FreedomNets's channels.
- » NFT marketplace will be introduced with FreedomNets token as a base currency
- » NFT borrow & lending will be introduced where game players can access funding easily
